

We're pleased to announce a massive new update to our S2 Form Processor: For Highrise® script. Here are some key highlights.

1. **Simplified installation.** A free demo is available without registering and the setup process has been greatly simplified making it easier to get up and running
2. **No more IonCube.** In the past we used an encryption method that had some compatibility issues with some hosting companies. This has been removed
3. **Email is now optional.** If you don't care about getting or sending confirmation emails, now you can turn that off
4. **Multiple installs.** If, for whatever reason, you need to install multiple copies of the script on your website, or place the files into a custom folder now you can.
5. **Customize CAPTCHA questions.** For advanced users, now you can edit the CAPTCHA questions and answers. Great for foreign language installations.

If you've been on the fence about giving our software a shot, now's the time to jump. Visit [Download Demo](#)
